AMORIM

ORIGIN OF CORK DECLARATION

To Whom It May Concern:

Amorim Cork Solutions declares the the cork utilized to make our cork granules comes from controlled areas and extracted according to the law in force in the country of origin.
Cork is grinded only by mechanical means, without any chemical added. Cork granules are then used to mix with a binder to produce agglomerated cork.

Cork is the outer bark of the Cork Oak Tree (Quercus suber). Cork Oak forests are present in the western part of Mediterranean basin, main in Portugal and Spain and North Africa – Morocco, Algeria and Tunisia.
The harvest occurs every 9 years, during of the expectable lifetime of the tree (around 150 year) and its extraction is harmless for the tree. The cork harvest is fundamental for the sustainability of the Cork Oak forest.
The main source of our raw cork are from Portuguese forests.

If we may be of any further assistance, please do not hesitate to contact us via email or phone.

materials used in its manufacture.
